Norprolac®

Non-ergot-derived¹ – for added peace of mind in hyperprolactinaemia

- An in-vitro study showed that the difference in potency between effects at D₂S and 5-HT₆ receptors is greatest for quinagolide (2100x), followed by cabergoline (290x) and bromocriptine (50x).²
- On this basis quinagolide may have the greatest safety margin between dopaminergic and serotonergic side effects.²
- Licensed for use up to the point pregnancy is confirmed.³
- Improved tolerability compared to bromocriptine.³
