THE SCOPE OF THE JOURNAL

The nature and functions of the endocrine organs in vertebrates and invertebrates; the anatomy, physiology and biochemistry of reproduction; endocrine chemistry; clinical endocrinology; the influence of hormones on behaviour

DIRECTIONS TO CONTRIBUTORS

1. Manuscripts should be sent to the Editor, The Journal of Endocrinology, 23 Richmond Hill, Bristol, BS8 1EN, England. The Editor is not responsible for loss of or damage to manuscripts and illustrations. Contributors should submit their papers in duplicate; duplicate sets of diagrams and plates may be rough copies.

2. Submission of a paper will be held to imply that it is unpublished, is not being considered for publication elsewhere and, if accepted for the Journal, will not be published elsewhere in the same form, either in the same or in another language.

3. COPYRIGHT. Articles are considered for publication on the understanding that if they are accepted for publication, in consideration for such acceptance the entire copyright shall pass to the Journal of Endocrinology Ltd. Authors will be asked to sign a copyright agreement to this effect.

Requests for permission to reproduce any part of papers published in The Journal of Endocrinology should be addressed to the Editor, The Journal of Endocrinology, 23 Richmond Hill, Bristol, BS8 1EN. The code at the top of each title page indicates the copyright owner's consent that copies of the article may be made for personal or internal use. Copying in the U.S.A., in excess of that permitted under Sections 107 or 108 of the U.S. Copyright Law, requires payment to The Copyright Clearance Center Inc., P.O. Box 765, Schenectady, New York 12301.

4. ETHICS OF EXPERIMENTAL PROCEDURES ON HUMAN BEINGS: authors are required to indicate in the text of their papers that they have complied with the recommendations of the pamphlet on human investigations taken from the Medical Research Council Report of 1962/63 (British Medical Journal, 1964, ii, 178–180). Manuscripts must contain a statement that consent has been obtained from each patient or subject after full explanation of the purpose and nature of all procedures used. It should be stated that the investigation was approved by the local ethical committee of the institution if such a body exists. (Free copies of the M.R.C. recommendations can be obtained from the Publications Group, Medical Research Council, 20 Park Crescent, London, W1N 4AL.)

5. Before submitting papers, contributors should consult: General notes on the preparation of scientific papers (Royal Society, 1974; 45p); Instructions to Authors (Biochem. J. (1978) 169, 4–27); Units, Symbols and Abbreviations (Royal Society of Medicine, 1972; 54p).

6. Manuscripts must be typewritten (double-spaced and preferably on paper with prenumbered lines in the margin) in English; spelling should follow the Shorter Oxford English Dictionary (3rd edn). Papers should be concise. A summary of the work and results (about 3% of the length of the paper) should be included. Tables should be typed on separate pages; each should be given a title and an arabic number. A short title, for page headings, should be supplied.

7. Hormone and steroid nomenclature and designations of units should follow the recommendations of the international conference and the IUPAC recommendations, although the IUPAC–IUB Commission on Biological Nomenclature recommendations on peptide hormone nomenclature are not being adopted. For detailed directions concerning steroid nomenclature, refer to J. Endocr. (1980) 84, 3–4. S.I. units and abbreviations should
Directions to contributors

be used (J. Endocr. (1980) 84, 4–7). Dosages should be given by weight or in the accepted international units. Where possible standard errors or statistical indications of variance should accompany mean values. For further details concerning the statistical treatment of results and the validation of biological and other assays see J. Endocr. (1980) 84, 1–3.

8. The name and address of the laboratory where the work was performed should be given.

9. references. Text references should be given as ‘Brown & Jones (1960)’ or ‘(Brown & Jones, 1960)’. For more than two authors, all names should be cited in the first reference, thereafter the first name only followed by et al. The reference list at the end of the paper should be in alphabetical order of authors’ names, including authors’ initials, full titles of articles, and first and last page numbers. Journal titles should be given in full. References to books should include chapter title, date and edition number, place of publication and publisher’s name.

10. Illustrations should be on separate pages, bearing the number and the author’s name. Diagrams should be drawn in indian ink on tracing paper, Bristol board or feint blue-lined paper at not less than double the size of eventual reproduction. Since the printer will insert all lettering and numbering in the Journal’s style, lettering and numbering should be given separately on a tracing paper overlay. Legends should be typed on separate pages. The magnification of photomicrographs should be stated, and any necessary reduction in size. A dummy layout of each plate should be provided.

11. Two halftone plates may be included in each paper free of charge. All colour plates may be charged to authors. Line drawings are cheaper than halftones and should be used where possible.

12. Papers may be rejected, or returned to the author for revision, if the style and presentation are unsatisfactory or do not conform to the Journal’s conventions. Authors are requested to have their manuscripts typed as closely as possible to the Journal’s style: alterations in presentation by the Editor delay publication.

13. To expedite refereeing, it is in the author’s own interest to provide duplicate copies of papers quoted as being ‘In Press’ (particularly those concerned with methodology) and other key references to which the referees might wish to refer but find difficult to obtain.

14. Because of increasing postal charges, manuscripts which have been rejected can no longer be returned to authors as a matter of course. Requests for the return of manuscripts and/or illustrations should be accompanied by an appropriate sum to cover the cost of postage.

15. Separates. Fifty separates of each paper will be given gratis. A limited number of extra copies can be ordered on the form accompanying the proof.

16. Contributions for the Proceedings of the Society for Endocrinology are accepted on the understanding that they have not been and are not being communicated elsewhere in substantially the same form, for publication of an abstract may prejudice subsequent publication of the full paper. Abstracts should not exceed 500 words, and should not contain tabular matter. Abstracts should be typed in double-line spacing and the title, author’s names and full postal address(es) should be typed in the usual style of a Proceedings abstract on the form provided by the Programme Secretary (see J. Endocr. (1980) 84, 7–8). The name and address of the author to whom proofs should be sent should be clearly stated on the abstract.
