**Supplementary Figure 5.** To determine the response in cardiac fibroblasts under “normal” conditions qPCR analysis of *Cxcl2* (A) and *Cxcl5* (B) was performed on RNA isolated from the cellular fractions 2 and 3 (Ft2/3) in *wt* mice. Values were relative to whole infarct tissue and normalised to GAPDH **p<0.01, ***P<0.005, n=5-6 per group.
